"Good course, well presented.
Material very applicable."
"Very good workshop. Relevant to the normal operating environment."
"Best course ever."
"Haven't attended a better workshop in my company."

Course director - Bryn Roberts

Coming from the aircraft industry, Bryn has had a number of roles including 'hands-on maintenance', maintenance planning and scheduling, conducting reliability centred maintenance analysis. He has much experience in the training role and ran a specialist team looking at multi-skilling, competence profiling and human factors integration.

Bryn has successfully completed a number of projects for major companies involving the application of equipment ownership and identifying maintenance options. He is also the author of 'Maintenance Options' published in October 2009, which describes in practical steps how to identify maintenance options and develop it into a practical maintenance plan.
